February 2026

## AccroLube with PTFE

AccroLube® High Temperature Polyurea with PTFE creates a boundary lubrication film that reduces wear between metal surfaces and protects against corrosion. It deposits a fine protective and lubricating film on the metal that will continue to function. Request more information and find out more about Accrolube at [www.metalloidcorp.com](http://www.metalloidcorp.com).

## Metalloid1 Performance Products

Explore Our Full Range of Products to Meet Your Business Needs

Discover a variety of products tailored for:

- Office
- Automotive
- Industrial
- Media/Cleaners
- Firearms and Sports

Please feel free to request a brochure today or visit [www.metalloidone.com](http://www.metalloidone.com).

## Grease in Industrial Applications

**Protecting Equipment. Improving Performance.**

Industrial grease reduces friction, protects components, and keeps equipment operating reliably in demanding environments. The right grease helps extend equipment life, reduce downtime, and lower maintenance costs.

### Why Industrial Grease Matters

- Stays in place under pressure and vibration
- Reduces wear and heat
- Resists moisture and contamination
- Protects against rust and corrosion

### Common Applications

- Bearings and bushings
- Gears and chains
- Slides, rails, and hinges

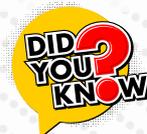

### Choosing the Right Grease

Not all greases perform the same. **Accrolube PTFE Grease** is engineered to handle heavy loads, wide temperature ranges, and harsh conditions where standard lubricants fall short.

### The Bottom Line

**Accrolube PTFE Grease** improves reliability, extends service life, and supports long-term equipment performance.
